## Walk-through uniCenta oPOS Install on Microsoft Windows 10

---

### **Url's used**

<https://sourceforge.net/projects/unicentaopos/>

<https://www.java.com/en/download/win10.jsp>

[https://download.microsoft.com/download/0/5/6/056dcda9-d667-4e27-8001-8a0c6971d6b1/vcredist\\_x64.exe](https://download.microsoft.com/download/0/5/6/056dcda9-d667-4e27-8001-8a0c6971d6b1/vcredist_x64.exe)

<https://dev.mysql.com/downloads/windows/installer/5.7.html>

---

### **Steps:**

Once you have downloaded the software with the provided links. Install the software. During the walk-through it was done in the following order.

**Note:** It is required to install "Visual C++ 2013 Redistributable x64" before starting the "MySQL 5.7" install.

- 1) Java
- 2) Visual C++ 2013 Redistributable x64
- 3) MySQL 5.7 (Server)
- 4) Extracted unicentaopos-4.3.2\_no\_installer.zip

### **Configuration**

1) Once you have installed the MySQL server and created a user, open the MySQL command line utility and create the database "unicentaopos"

**# CREATE DATABASE unicentaopos;**

2) Extract the unicentaopos-4.3.2\_no\_installer.zip and run the "**start.bat**" file.

3) Select the tab **database** and enter the detail of the database, username and password you created during the MySQL install.

4) run "**start.bat**" this time it should prompt you to create the database as none is detected. Select yes.
